

Gawain – minimal creative landing page

Installation and basic configuration

To install Gawain, upload the contents of the `Gawain v1.2.1` folder to your web server using any method you prefer (usually FTP).

In `includes/functions.php` on line `10`, change `example@example.com` to your email address to receive contact messages and notifications about new subscribers.

Customization

To replace the intro background image, simply replace the `intro-background.jpg` file located in the `assets/img/` folder.

Contact form

Gawain's contact form is hidden behind the main container. All you have to do is assign a `contact-toggle` class to any element (assigned to a "Work with us" button in the navbar by default). A click on that element will toggle contact form visibility. You can assign this class to multiple elements.

Subscription form

Gawain's subscription form can integrate with two most popular subscription management services: MailChimp and CampaignMonitor. By default, it stores email addresses in the `subscribers.php` file.

Your preferred method for handling subscribers (`file`, `mailchimp` or `campaignmonitor`) can be set on line `13`.

MailChimp integration

1. Set subscription method to `mailchimp` (see above).
2. Obtain your API key by following these instructions: Where can I find my API Key?
3. Obtain a list ID by following these instructions: How can I find my List ID?
4. Open `includes/function.php` and paste your API key and list ID on lines `17` and `18` respectively.
5. Save file.

Your code should look like this:

```
'api_key' => 'xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx-xxx',  
'list_id' => 'xxxxxxxxxx'
```

CampaignMonitor integration

1. Set subscription method to `campaignmonitor` (see above).
2. Obtain your API key by following these instructions: Where can I find my API key?
3. Obtain a list ID by following these instructions: Your List ID
4. Open `includes/function.php` and paste your API key and list ID on lines `23` and `24` respectively.

5. Save file.

Your code should look like this:

```
'api_key' => 'xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx',  
'list_id' => 'xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx'
```

Comments

Gawain includes a working [Disqus](#) comments widget. To enable comments, register on Disqus, then open 'post.html' (this is a post template), find this line: `var disqus_shortcode = 'example';` and replace `example` with your Disqus username. And that's it!

Support

If you encounter any problems or have any questions, please do not hesitate to contact me via email: mailbox@happytodesign.com And thank you for purchasing this template!

Regards,
happytodesign
